Импакт фактор или фактор утицаја

- Импакт фактор за посматрану годину је бројна вредност која се добија тако што се број цитата у посматраној години за радове публиковане у последње две године подели са бројем радова публикованих у последње две године у посматраном часопису.
- Представља просечну очекивану цитираност сваког чланка објављеног у том часопису у датој години

Priča o IF

Kako se računa impakt faktor

Brojna vrednost impakt faktora dobija se tako što se broj citata za dve poslednje godine podeli brojem objavljenih radova u te dve godine.

Primer: Časopis American Economic Review je u svim radovima iz referisanih časopisa u WoS objavljenim 2006. godine bio citiran 5913 puta.

Od tog broja 584 puta su citirani radovi koji su objavljeni u 2005, a 2186 puta oni radovi koji su objavljeni 2004. godine. Taj časopis je u 2005-oj objavio 148 radova, a u 2004-oj godini 193 rada. Tada se njegov faktor uticaja računa na sledeći način: $(584 + 2186)/(148 + 193) = 8.12$. Znači, impakt faktor časopisa American Economic Review za 2006. godinu je 8.12. Ovako izračunat faktor uticaja eliminiše razlike koje su mogle da nastanu kao posledica veće periodičnosti (više brojeva godišnje) ili dužinom izlaženja časopisa.

IF je tema diskusije i u međunarodnoj naučnoj zajednici, pa to neki vide i ovako (ovo je šala).

Хиршов или h - индекс

- Хиршов индекс је број који казује да је посматрани научник објавио h радова који су сви били цитирани најмање h пута. Што је број већи, то су и радови посматраног научника у просеку утицајнији.
- Хиршов индекс даје реалнију слику утицајности научних радова појединог научника него импакт фактор часописа у којима су радови објављени.

Zašto H-indeks?

U istraživačkoj zajednici postoji stalna potreba da se uspostave kriterijumi za vrednovanje naučne produkcije pojedinačnih istraživača, univerziteta, institucija, kao i samog naučnog izdavaštva. Do skora se najčešće koristio **Impakt faktor** časopisa, ali se poslednjih godina testiraju i nove mere. Među njima se posebno ističe H-indeks.

H-indeks je pokazatelj naučne uspešnosti istraživača koji istovremeno uzima u obzir kako naučnu produktivnost istraživača, merenu brojem objavljenih radova, tako i uticaj, mereno brojem citata tih radova u drugim radovima. Dakle, za svakog pojedinačnog istraživača (ili grupu istraživača ili instituciju) moguće je izračunati H-indeks na osnovu broja objavljenih radova i citiranosti tih radova u radovima drugih istraživača.

Ime potiče od Jorge Hirša (Jorge E. Hirsch), fizičara koji je ovu meru predložio i predstavio je u članku objavljenom 2005. godine. H-indeks je zbog jednostavnosti izračunavanja i određenih prednosti koje ima u odnosu na druge pokazatelje naučne uspešnosti za kratko vreme postao veoma popularna mera za evaluaciju naučnog rada, sudeći prema prisutnosti H-indeksa u obe svetske citatne baze (Web of Science i SCOPUS).

Šta je H-indeks i kako se računa?

Lista objavljenih radova se uredi prema opadajućoj vrednosti dobijenih citata za te radove. Na taj način, redni broj 1 će imati rad sa najvećim brojem citata, sledeći rad sa manjim ili istim brojem citata će dobiti redni broj 2 i tako dalje. Ako obeležimo redne brojeve radova sa N, a citiranost radova sa C. Vrednost H-indeksa predstavlja najveću vrednost rednog broja za koju je $C \geq N$, tj. onaj broj radova koji imaju veći broj citata od rednog broja poslednjeg rada u toj grupi.

Formalno rečeno, naučnik ima indeks h ako h radova od njegovih (ili njenih) M (broj objavljenih radova) radova imaju najmanje h citata, a ostalih M - h radova imaju najviše h citata.

Na primer: istraživač koji je objavio radove A-I ima vrednost H-indeksa 6.

Redni broj	Rad	Broj citata
1	A	12
2	B	11
3	C	11
4	D	10
5	E	8
6	F	7
7	G	5

Prijavljivanje novih časopisa za referisanje

Svake godine Thomson Reuters procenjuje oko 2.000 novih časopisa za referisanje u WoS, a nivo prolaznosti je do 10%-12%. Ta evaluacija je besplatna, i obuhvata striktno **definisane kriterijume**. Nakon **početnog prijavljivanja**, potrebno je poslati naredne tri sveske neposredno nakon objavljivanja.

Kategorizacija domaćih časopisa

U okviru programa "Bibliometrijska analiza i preliminarna kategorizacija domaćih naučnih časopisa" jednom godišnje objavljuju se rezultati u obliku interaktivnog web izveštaja pod nazivom **Bibliometrijski izveštaj o časopisima**. Detaljan opis ovog programa dostupan je na [web stranici CEON-a](#), gde se pored popisa svih pokazatelja nalazi i način njihovog izračunavanja.

Konačnu odluku o kategorizaciji časopisa koji izlaze u Srbiji, usvajaju Matični odbori ([sastav](#)) u okviru Ministarstva nauke. Za sva pitanja u vezi bodovanja naučnih radova obratite se analitičarima za pojedinačne naučne discipline: za [osnovna istraživanja](#) i [tehnološki razvoj](#).

U cilju poboljšanja kvaliteta domaćeg naučnog periodičnog izdavaštva Ministarstvo je donelo [Akt o uređivanju naučnih časopisa](#).

The screenshot shows the website interface for the European Reference Index for the Humanities (ERIH). At the top, there is a navigation bar with links for 'Bookmark this page', 'FAQ', 'Member pages', 'RSS', 'Sitemap', and 'Subscribe'. Below this is a green banner with the ESF logo and the tagline 'SETTING SCIENCE AGENDAS FOR EUROPE'. A secondary navigation bar contains links for 'Home', 'About ESF', 'Activities', 'Research Areas', 'Publications', 'Media Centre', 'Jobs', and 'Contact'. The main content area is titled 'European Reference Index for the Humanities (ERIH)'. It includes a left sidebar with a tree view of categories, a main text block describing the index, a list of links to reports and governance documents, and a prominent button for the 2011 revised lists. An illustration of a person at a computer is also present.

European Reference Index for the Humanities (ERIH)

The European Reference Index for the Humanities (ERIH) is the only reference index created and developed by European researchers both for their own purposes and in order to present their ongoing research achievements systematically to the rest of the world. It is also a unique project because, in the context of a world dominated by publication in English, it highlights the vast range of world-class research published by humanities researchers in the European languages.

A list of core disciplines was identified as central to the European humanities community and Expert Panels in these disciplines were set up to review journals which had been proposed by the various ESF Member Organisations as well as by editors and publishers.

The ERIH Revised Lists 2011 published herewith are the result of the second round of the ERIH project, following the revisions of the ERIH Initial Lists.

Publish or Perish calculates the following citation metrics:

- Total number of papers
- Total number of citations
- Average number of citations per paper
- Average number of citations per author
- Average number of papers per author
- Hirsch's **h-index** and related parameters, shown as **h-index** and **Hirsch a=y.yy, m=z.zz** in the output. Also Zhang's **e-index**.
- Egghe's **g-index**, shown as **g-index** in the output
- The contemporary **h-index**, shown as **hc-index** and **ac=y.yy** in the output
- Three variations of the individual **h-index**, shown as **hi-index**, **hi,norm**, and **hm-index** in the output
- The age-weighted citation rate
- An analysis of the number of authors per paper.

Please note that these metrics are only as good as their input. We recommend that you consult the following topics for information about the limitations of the citation metrics and the underlying sources that Publish or Perish uses:
